Home Energy Advice

SOLAR PV

Did you know that Solar PV panels allow you to generate your own electricity in a cost-effective way ?

- Solar PV Panels can be installed on the roof of your house, the roof of a shed/garage or on the ground
- Homeowners can get a grant of up to €1800 and an entry-level system could cost around €5000 after the grant. This will pay for itself in ~6 years.
- You can also have a battery that stores your solar electricity until you need it and can keep you going if the grid goes down.

FARMERS

There is a 60% TAMS grant for farmers and an installation on a farm can cover both the farm and home's electricity if they are on the same meter.
